**Composite Basic Service Accessibility Index Rank (within District)**

### Notes:

- Ratio of populated area covered by functional basic services (education, health, water points) within a sub-county is calculated by using national standards (2.5km for education, 5km for health, and 1-2 km for water points). Approximate area falls inside those zones are treated as accessible & falls outside are treated as not accessible. Accessibility is based on aerial distance - assumed that people travel most direct route in plain area.
- Service access index is calculated using index formula -> (X-min)/(max-min). Composite index is average of 3 services (education, health, and water) in sub-county. Coverage and accessibility change over time. For updated information, please contact the respective District Office/Cluster Leads directly.
