Guiding Note for Camp Population:

Camp population figures is calculated on remaining population in the main IDP camps. The baseline is the November 2005 General Food Distribution population figures produced by WFP. The baseline date is used by the Inter-Agency Standing Committee after an agreement between UNHCR, UNOCHA and WFP. It should be noted that for a few camps no figures was available in November 2005. These camps are indicated in the list below and instead UNOCHA figures from June 2007 is applied as baseline for these camps. The current camp population figures, individuals and households, are produced by camp management agencies operating in each camp. The current population is divided with the baseline for each camp which produces a percentage indicating the size of the remaining population as compared to November 2005. The camp population figures have no correlation or reference to the return or relocation in the areas which they are located. The reason being that not everyone in Kitgum district was displaced to a camp inside their sub-counties and a significant number of people from Kitgum is believed to have been displaced outside the district, while another significant number of people from neighbouring districts are believed to have been displaced to camps in Kitgum district. Therefore, a direct correlation between estimated return and relocation population versus camp population can not be made. (Source: UNHCR, Nov 08)
